

The model 1412 convertible

Would you like to use your 12 pin detector with a 14 pin MCA or tube base?

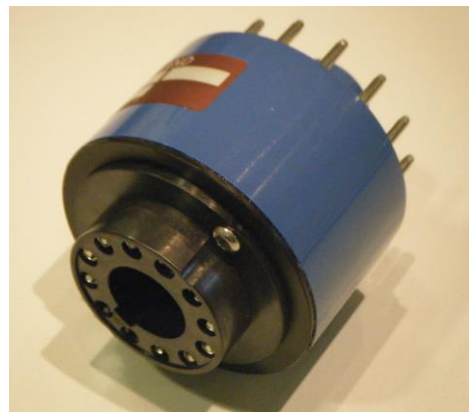

Scionix has the answer!

The **model 1412 convertible** is designed to take a detector with a 12 pin output and convert it to a 14 pin male output.

The **Model 1412** is wired internally from a 12 pin female base to a 14 pin male base.

This will now allow smaller PMT's to be used with the new 14 pin **MCA's**.

The **Model 1412** can also be used with **voltage dividers** and **preamplifiers**
